EL MONTE, CALIFORNIA

INTRODUCTION

HI THERE !

Well another year has passed by and again we take pleasure in saying a special hello to all of you. Thanks so much for all the nice letters and we wish that we had time to answer them with longer messages. And another big thanks for all the orders that were sent our way last year. We hope that this year you will favor us with your trust in our plants for if it wasn't for your orders you wouldn't have this little catalog in your hands right now.

We have about 2 acres of plants for your gardens just waiting to be ordered. In the past year we moved to our new office and have added better shipping and packing facilities so as to speed your order fast as possible. This year we are again asking you to please give us a few days lee-way in shipping your order for the orders really pile up thru July and August. We still like to ship at the time the customer wishes instead of shipping in rotation.

And now another word about California plants. They are completely hardy except those listed as tender. Many other gardens say California plants are no good but just ask them where they get theirs from and 9 out of 10 will say California.

Now for our own little special report about ourselves. This past Fall we had the pleasure of visiting many of our customers thru-out the country and now are better able to understand their problems in gardening. Thru the Southern states we saw the results of the long drought which made gardening almost impossible and realized why some of our plants didn't survive. Right now we also want to say thanks for all the hospitality that was extended to us to make our last vacation the most memorable thing that ever has happened to us. We sure hope that this coming season will bless you all with a lot nicer weather than you had last year.

Although you are welcome here at the gardens any time we now extend a special invitation to visit us at blooming season and enjoy our colorful show along with us. The blooming season reaches its peak about the last week of April till about the middle of May. We are located mid-way between U. S. 66 and U. S. 99, 4 blocks east of Peck Road, north of Lower Azusa Road 3 blocks. From the west take the Ramona Freeway to Rosemead Blvd. Then north to Lower Azusa Road, east to Cogswell Road. Then north 3 blocks to Hallwood Drive. From the east take Peck Road to Lower Azusa Road.

INTRODUCING FOR '55:

From the garden of the well known hybridizer Mr. G. H. Murray of Covina, California comes the following two introductions. I know you will like them both, otherwise we would not be offering them to you at this time. We have sufficient stock to offer them at a very low price. So be the first to have something better than average that's new, in your garden next year.

GREEN HAT—In the last few years there seems to be much interest in producing green blossoms on iris. This is perhaps one of the best to date. The standards are a green chartreuse, with falls of hazelnut brown edged with the green standard color, set off with a gold beard. This all is done in a very heavy substance, on well branched stems that are about 38 to 40 inches in height. This blooms mid-season to late for us. Seven to ten blossoms to a stalk. The parentage is (Green Pastures X Melitza) X Appointee. With this parentage bringing in onco blood it would be well worth breeding further with this7.50

IRIS LURE — As the name would have you believe, this is an iris that draws everyone that sees it. Standards and falls are a medium lemon yellow with a large white area on both. A good yellow beard with no haft markings. Perfect branching and the heaviest of substance on stems about 40 inches in height. The blooming period is late mid-season. The parentage is Gudrun X Grand Marshall. One of the most prolific growing iris that we have seen. As most of you know you just can't plant too many yellow iris in a garden so we know you will like this one.....7.50

ONCOBREDS

In this section you will find one of the most interesting types of bearded iris grown today. All of them are descendents of iris that come from in and around the Holy Land. As a rule it is quite hard to grow these native species, but thanks to our modern day hybridizers who have crossed and recrossed these natives with our regular bearded iris which grow so well; we have now plants which grow quite easy and have flowers that look a great deal like the wild species. As a rule most of these listed are quite hardy in the open, but some will need a little protection in the coldest areas. In all cases we will advise you when you order a tender variety. So this year if you do not grow any of these listed order a couple and tuck them in somewhere. You won't regret it.

INTERMEDIATE AND FALL BLOOMING IRIS

We still find a growing interest in these shorter and smaller cousins to the tall bearded varieties. This year we are again listing the Tables, Intermediates and Fall Bloomers together. Most of you will notice that the list this year is even smaller than last, for the sales were heavier than we expected. The shorter bloom stalks and smaller blossoms make them ideal for arrangements and also stand up to the weather better. Most all listed will grow quite fast and produce large clumps the first year.

ARCADIA BLUE E 30" This iris blooms all year round for us. The standards are light blue with the falls a little darker with a hint of lavender35	LORELEY M 24" An old one but still unusual. Yellow standards and deep purple falls35
BENGAL PRINCESS E 24" Standards yellow, with falls chartreuse-yellow marbled with darker yellow and purple. This one seems to bloom all thru the year for us....75	ORCHID IMP M 24" Light yellow standards and deep orchid falls...35

DAYLILIES-HEMEROCALLIS

Again this year we want to say "Daylilies are one plant that should be in everyone's garden." They take over where other spring flowers leave off. They bloom from late spring till the first frost, after they have become well established. They now come in an assortment of many, many colors; not like many of you believe, just the plain old lemon lily. No pests seem to bother these beauties for they grow and bloom for you without trouble at all. Leave them planted in a clump for several years and the blooms will get larger and more flowering scapes are produced. Most all varieties are hardy from Canada southward, so make it a point to plant a little corner of your garden with them. We know you won't be disappointed.

The divisions that we send out are large and heavy. In all instances when stock permits they will be double or better. All stock will be wet packed so as to be received as fresh as possible. We send Daylilies any time of the year when our weather permits.
